University of Dundee Mathematics Division

MA21002: Computer Algebra and Dynamical Systems
Module Guide 2013/2014

Organisation

The MA21002 module is a Level 2 module that runs for 11 teaching weeks in the second semester. All organisation and teaching will be carried out by:

Dr David Pontin, Dr Niall Dodds
Mathematics Division, Mathematics Division
Room G1E, Room G5,
Fulton Building Fulton Building
Tel: 01382 – 384466 01382 384470
email: dpontin@maths.dundee.ac.uk ndodds@maths.dundee.ac.uk

Dr Pontin is the Module Leader.
In order to take this course you should have passed modules MA11001 and MA12001, or have an equivalent qualification. You should have also taken MA21001 and be taking MA22001.
You may bring matters of concern about the course to the attention of the Mathematics Division Staff/Student Committee, which meets once each semester. A volunteer from one of the level 2 courses will act as class representative to sit on the Staff–Student Committee; their name will be posted on BlackBoard.

Timetable

This course involves 6 contact hours per week, typically 3 lectures and 3 computer workshops.

Your Commitment

You should attend all lectures and workshops except on medical grounds or with the special permission of the lecturer concerned. If you are absent from a class test or cannot complete an assignment on account of medical problems, you have to submit a medical certificate to the School Office immediately.
About 13 hours per week of your study time, including timetabled hours, should be devoted to this module.

Study Support

If you are having difficulty with the course work you are encouraged to seek help at an early stage at the workshops.
Syllabus
(content is indicative only and subject to change)

Part 1 : An introduction to Maple
   1) The Maple front end and syntax
   2) Plotting
   3) Integration/differentiation
   4) Differential equations
   5) Vectors, Matrices and their operations

Part 2 : An introduction to Dynamical Systems
   1) Newton’s laws
   2) Keplerian motions
   3) Mathematical Pendulum
   4) Physical Pendulum/anharmonic oscillator, dynamics in phase space,
   5) Damped oscillator and driven damped oscillator

Assessment

Assessment: 40% continuous assessment, consisting of 20% for assignments and 20% for tests. The examination, which is a two-hour examination paper held in the April/May Examination diet counts for 60%.

To pass this module in April/May it is necessary to gain at least 40% in the overall assessment and obtain a mark of at least 30% in the exam.

For those who fail the module in December, there will be a two-hour examination paper at the August Examination diet. To pass this module in August it is usually necessary to gain at least 40% in the August examination.

The Head of Division may debar a student not performing at a satisfactory level in the continuous assessments from entering the Degree Examination.

Feedback

At the end of the module you will be asked to complete a confidential questionnaire regarding the content and presentation of the module. This is an important element in the University’s Academic Standards procedures.

Recommended Books

Much of the material for the second part of the course is to be found in

Mechanics
by R C Smith and P Smith
Publisher: John Wiley.

Many similar textbooks may be found in the University Library.
